

# Software Requirements Specification (SRS)

## To-Do Application – WorkArena Task

### 1. Introduction

This document provides the Software Requirements Specification (SRS) for the To-Do Application assigned as a practical task to users within the WorkArena platform. The goal of this task is to evaluate the user's understanding of basic web application development, requirement analysis, and user-centric design principles.

#### 1.1 Purpose

The purpose of this document is to clearly define the functional and non-functional requirements of the To-Do Application. It serves as a reference for users, evaluators, and simulated team roles within WorkArena such as Project Manager, Developer, and Tester.

#### 1.2 Scope

The To-Do Application is a simple web-based system that allows users to create, view, update, and delete tasks. Each task may include a title, description, due date, and completion status. The application is intended for individual use and does not require multi-user collaboration.

### 2. Overall Description

The application is designed to be intuitive, responsive, and easy to use. It targets beginners and intermediate users who are learning full-stack or frontend development through simulated job tasks on WorkArena.

#### 2.1 User Characteristics

- Basic understanding of web technologies (HTML, CSS, JavaScript or Python frameworks).
- Familiarity with CRUD operations.
- No prior experience with advanced frameworks is required.

### 3. Functional Requirements

- The system shall allow the user to add a new task.
- The system shall allow the user to view a list of all tasks.
- The system shall allow the user to edit an existing task.
- The system shall allow the user to delete a task.
- The system shall allow the user to mark a task as completed or pending.
- The system shall store tasks persistently (database or local storage).

### 4. Non-Functional Requirements

- The application shall have a simple and user-friendly interface.
- The application shall respond to user actions within acceptable time limits.
- The application shall be accessible on both desktop and mobile devices.
- The application shall ensure basic data validation and error handling.
- The application shall follow clean coding and modular design principles.

### 5. Constraints

The application must be developed within the given time frame of the WorkArena task. The technology stack may be restricted based on the role or challenge assigned to the user. No third-party paid services are allowed.

### 6. Assumptions

It is assumed that the user has access to a development environment and internet connectivity. The evaluator will assess the application based on functionality, code quality, and adherence to the given requirements.
